## CONFORMAL COATING CC-A

### PRODUCT DESCRIPTION:

Roly International CONFORMAL COATING CC-A is a unique clear coating to protect circuit component boards and other items against atmospheric corrosion, moisture, static electricity and electrical interference.

CONFORMAL COATING CC-A is designed to apply clearly so that the substrate can be read through the coating. This poses a problem of how to determine if there is proper coverage. This, however, is no problem with Roly International CONFORMAL COATING CC-A since coverage can be checked with the use of an ultra violet light, preferably of the long wave length (365nm, 330uw/cm<sup>3</sup>).

Some other unique points are the ability for the technician to solder right through the coating, therefore eliminating the timely and costly coating cleaning process during repair of component boards. Furthermore, Roly International SUPER FLUX REMOVER FR-A will easily and effectively clean the component boards of our CONFORMAL COATING CC-A on the occasion it is needed. It is excellent as a sealant for small cracks and leaks.

As all of our other products, CONFORMAL COATING CC-A is assured a factory sealed high quality product as it is developed and produced by our own modern manufacturing facility in Ventura, CA. USA.

### PRODUCT APPLICATION:

Roly International CONFORMAL COATING CC-A is easily applied by simply spraying the product onto a clean substrate and allow to dry. The substrate can be effectively and safely cleaned with Roly International ELECTROCLEAN EC-A. Masking tape can be used to temporarily mask areas not desired to be coated such as contact terminals. Use in well ventilated area. Material Safety Date Sheets are available.

Please refer to our brochures for detailed technical information as well as our other fine Roly International products or contact us for any questions you may have regarding our products.
